

NCEP Contributions to the WMO Severe Weather Forecasting Demonstration Project (SWFDP) and to the African Monsoon Multidisciplinary Analysis (AMMA) Initiative

1. Rainfall Forecast: Valid 06Z of July 25 – 06Z of July 29, 2015. (Issued at 1530Z of July 24, 2015)

1.1. Twenty Four Hour Cumulative Rainfall Forecasts

The forecasts are expressed in terms of high probability of precipitation (POP), based on the NCEP/GFS and the NCEP global ensemble forecasts system (GEFS) and expert assessment.

Summary

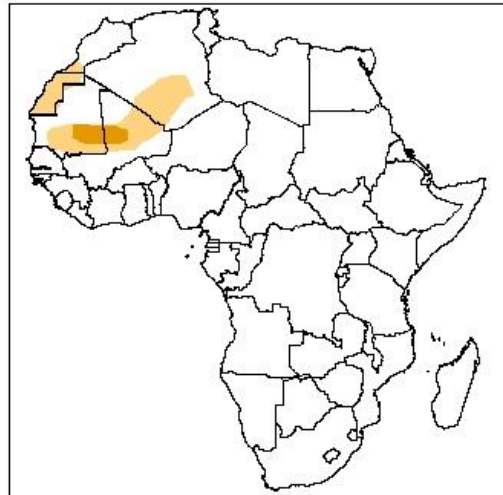

In the next five days, the monsoon flow from the Atlantic Ocean and its associated convergence across West and Central Africa, combined with westward propagating convective systems across the central Africa, southern Sahel, and the Gulf of Guinea countries, and active lower level wind convergences across northern DRC and parts of the Greater Horn of Africa are expected to enhance rainfall in their respective regions. Thus, there is an increased a chance for heavy rainfall over, Guinea Conakry, Sierra Leon, Liberia, Mali, Nigeria, Cameroon, CAR, Uganda,, DRC, Chad, South Sudan, Sudan, South Africa, Kenya, and Ethiopia.

Atmospheric Dust Forecasts, day 1 to day 3,
Moderate Dust Concentration (MDC) and High Dust Concentration (HDC)

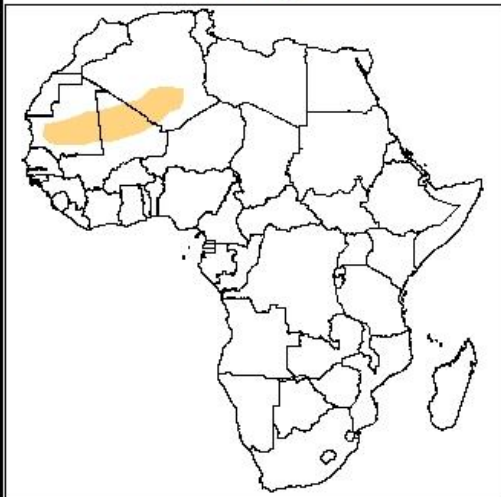

Day 1 Dust forecast
Jul 25, 2015

Day 2 Dust forecast
Jul 26, 2015

Day 3 Dust forecast
Jul 27, 2015

Highlights

There is an increased chance for moderate to high dust concentration over some parts of the Sahel and North African countries, with highest dust concentration expected over some parts Mauritania, and Mali.

Legend

MDC, Vis. < 5km

HDC, Vis. < 1km

1.2. Model Discussion, Valid: July 25 – July 29, 2015

The Azores high pressure system over Northeast Atlantic Ocean is expected to relax with its central pressure value decreasing from about 1027hpa to 1024hpa during the forecast period, according to the GFS model.

The St Helena high pressure system over the Southeast Atlantic Ocean is expected to relax, with its central pressure value is decreasing from about 1041hpa to 1032hpa during the forecast period.

The Mascarene high pressure system the Southwest Indian Ocean is expected to relax, with its central pressure value decreasing from 1031hpa to 1025 during the forecast period, according to the GFS model.

The heat low over northern Mali is expected to deepen gradually, with its central pressure value decreasing from about 1006hpa to 1004hpa during the forecast period.

The northern limit of the 1020hpa isobar associated with the East African ridge is expected to extend northwards up to the latitudes of Ethiopia during the forecast period.

At 925Hpa level, the monsoon flow from the Atlantic Ocean is expected to prevail across much of the Gulf of Guinea countries, and the neighboring areas of the Sahel and Central African countries. A zone of wind convergence is expected to prevail across the Sahel region, with a cyclonic circulation propagating westward the Sahel region during the forecast period.

At 850Hpa level, east-west oriented wind convergence is expected to remain active across the Sahel region, with feeble cyclonic circulations propagating westward between Chad and Mali during the forecast period. On the other hand, strong lower level wind associated with the Somali Jet is expected to remain along the East Africa coast and the neighboring areas of northwestern Indian Ocean and the Arabian Sea.

At 700hpa level, easterly flow is expected to prevail across West and Central Africa countries, with a trough in the easterlies propagating westwards across the Gulf of Guinea countries during the forecast period..

In the next five days, the monsoon flow from the Atlantic Ocean and its associated convergence across West and Central Africa, combined with westward propagating convective systems across the central Africa, southern Sahel, and the Gulf of Guinea countries, and active lower level wind convergences across northern DRC and parts of the Greater Horn of Africa are expected to enhance rainfall in their respective regions. Thus, there is an increased a chance for heavy rainfall over, Guinea Conakry, Sierra Leon, Liberia, Mali, Nigeria, Cameroon, CAR, Uganda,, DRC, Chad, South Sudan, Sudan, South Africa, Kenya, and Ethiopia.

2.0. Previous and Current Day Weather Discussion over Africa

(23 July – 24 July, 2015)

2.1. Weather assessment for the previous day (July 23, 2015)

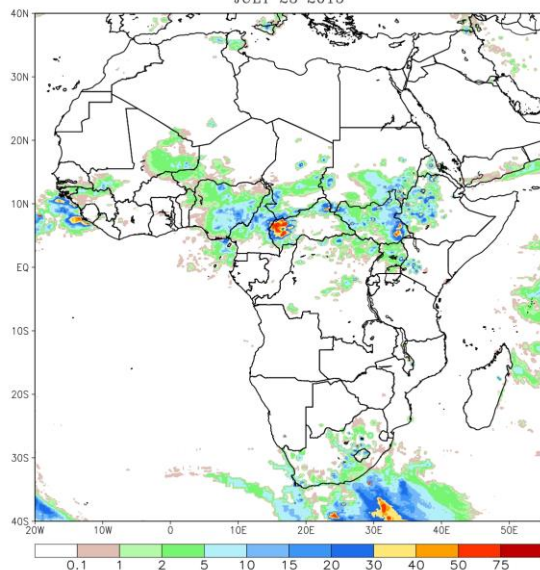

Moderate to heavy rainfall were observed across Mali, Nigeria, Cameroon, Chad, CAR, DRC, Uganda, South Sudan, Sudan, South Africa, Kenya, and Ethiopia.

2.2. Weather assessment for the current day (July 24, 2015)

Intense convective deep clouds are observed over Mali, Nigeria, Cameroon, Chad, CAR, DRC, Uganda, South Sudan, Sudan, Kenya, South Africa, and Ethiopia.
