

Climate Prediction Center's Central Asia Hazards Outlook For USAID / FEWS-NET March 19 - 25, 2020

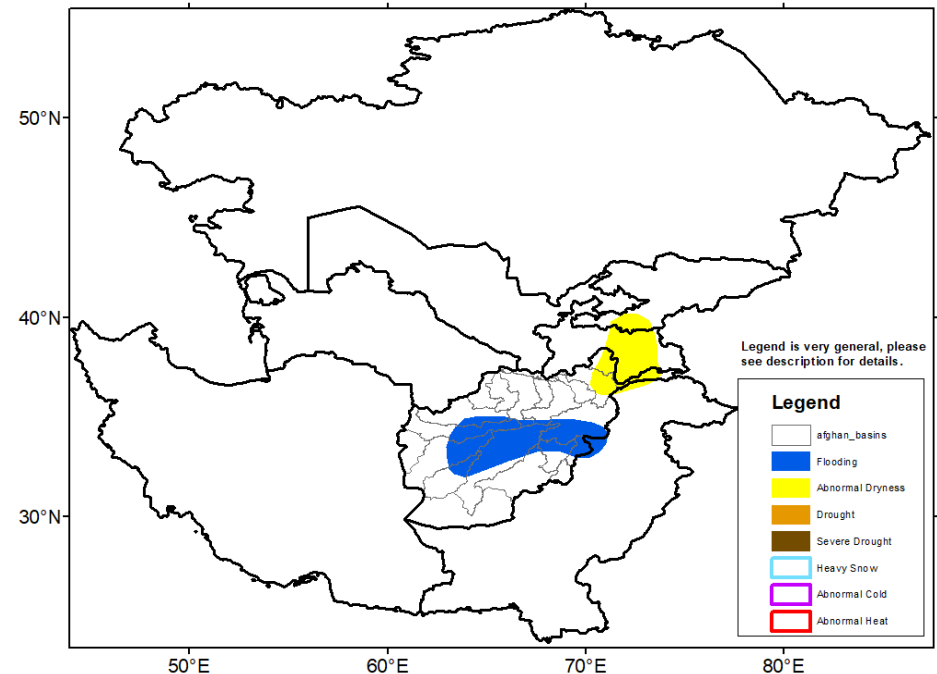

Temperatures:

Above normal temperatures persisted during the second week of March across Kazakhstan, while near to slightly normal temperatures prevailed farther to the south in Afghanistan. Maximum temperatures reached 25 degrees C as far north as Turkmenistan and the lower elevations of northwest Afghanistan. The GFS model indicates that above normal temperatures are likely throughout the region during late March.

Precipitation

Heavy rain (25 to 100 mm) fell across extreme eastern Afghanistan and much of Pakistan from March 10 to 12. As a low pressure system tracked east, drier weather overspread Afghanistan and Pakistan. Dry weather prevailed across the remainder of the region from March 8 to 14. Snow water equivalent anomalies continue to indicate large negative anomalies across parts of northeast Afghanistan and eastern Tajikistan. Therefore, an abnormal dryness hazard is maintained for these areas.

A strong low pressure system is forecast to track east into Afghanistan and result in heavy rainfall (locally more than 50 mm) across central parts of the country. This heavy rainfall coupled with snow melt increases the chances of flooding across parts of Afghanistan.

Note: The Hazards outlook map is based on current weather/climate information, short and medium range weather forecasts (up to 1 week), and assesses their potential impact on crop and pasture conditions. Shaded polygons are added in areas where anomalous conditions have been observed. The boundaries of these polygons are only approximate at this continental scale. This product does not reflect long range seasonal climate forecasts or indicate current or projected food security conditions.

FEWS NET is a USAID-funded activity whose purpose is to provide objective information about food security conditions. Its views are not necessarily reflective of those of USAID or the U.S. Government. The FEWS NET weather hazards outlook process and products include participation by FEWS NET field and home offices, NOAA-CPC, USGS, USDA, NASA, and a number of other national and regional organizations in the countries concerned. Questions or comments about this product may be directed to Wassila.Thiaw@noaa.gov or 1-301-683-3424. Questions about the USAID FEWSNET activity may be directed to Gary Eilerts, USAID Program Manager for FEWSNET, 1-202-254-0204 or geilerts@usaid.gov.
