

## Climate Prediction Center's Central Asia Hazards Outlook For USAID / FEWS-NET June 11 - 17, 2020

### Temperatures:

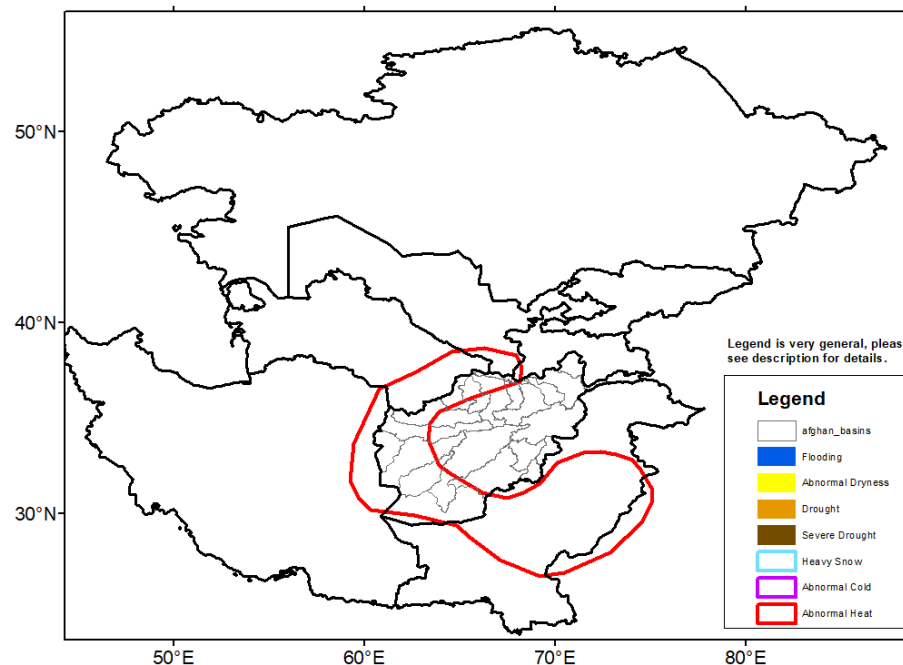

Above-normal temperatures prevailed across the region during the first week of June. The largest positive anomalies (up to +8 degrees C) were observed across northern Kazakhstan. Maximum temperatures reached 30 degrees C in this region, while maximum temperatures were as high as 38 degrees C across the lower elevations of western and southern Kazakhstan.

During the outlook period, near to above normal temperatures are likely to persist. Abnormal heat hazard is posted for areas where maximum temperatures are likely to exceed 40 degrees C and average more than 6 degrees C above normal.

### Precipitation

Mostly dry weather prevailed throughout a majority of the region but locally heavy rain (more than 25 mm) was observed at the higher elevations of Kyrgyzstan and Tajikistan along with northern Pakistan. Based on gauge data, the largest 30-day precipitation deficits (around 25 mm) exist across northeast Kazakhstan. This region will be closely monitored for short-term dryness.

According to the GFS model, the heaviest precipitation (25 to 75 mm) is forecast to be limited to the higher elevations of northeast Afghanistan, Tajikistan, and Kyrgyzstan. Mostly dry weather is expected across much of Kazakhstan although scattered showers (locally more than 25 mm) are forecast for extreme northern parts of Kazakhstan.

**Note: The Hazards outlook map is based on current weather/climate information, short and medium range weather forecasts (up to 1 week), and assesses their potential impact on crop and pasture conditions. Shaded polygons are added in areas where anomalous conditions have been observed. The boundaries of these polygons are only approximate at this continental scale. This product does not reflect long range seasonal climate forecasts or indicate current or projected food security conditions.**

FEWS NET is a USAID-funded activity whose purpose is to provide objective information about food security conditions. Its views are not necessarily reflective of those of USAID or the U.S. Government. The FEWS NET weather hazards outlook process and products include participation by FEWS NET field and home offices, NOAA-CPC, USGS, USDA, NASA, and a number of other national and regional organizations in the countries concerned. Questions or comments about this product may be directed to Wassila.Thiaw@noaa.gov or 1-301-683-3424. Questions about the USAID FEWSNET activity may be directed to Gary Eilerts, USAID Program Manager for FEWSNET, 1-202-254-0204 or geilerts@usaid.gov.
