

## The USAID FEWS NET

## **Haiti Weather Hazards and Benefits Assessment**

For

November 13 – November 19, 2008

During the last observation period, much of Haiti experienced low to moderate rainfall amounts ( 10-25 mm), with the highest amounts observed in the central departments along the Haiti / D.R. border. Since early October, much of Haiti continues to see a shortage of seasonal precipitation which has resulted in locally deteriorating crop conditions in the Artibonite, Nippes and Ouest departments. Seasonal rain deficits in excess of 100mm continue to be felt along the southern coastline. Precipitation forecasts show an slight increase in rains in the central and southern departments during the observation period (Nov 13- Nov 19), with locally heavier totals (> 40 mm) near the Haiti / D.R. border.

FEWS NET is a USAID-funded activity whose purpose is to provide objective information about food security conditions. Its views are not necessarily reflective of those of USAID or the U.S. Government. The FEWS NET weather hazards assessment process and products include participation by FEWS NET field and home offices, NOAA-CPC, USGS, NASA, and a number of other national and regional organizations in the countries concerned. Questions or comments about this product may be directed to Wassila. Thiaw@noaa.gov or 1-301-763-8000 x7519
