

Climate Prediction Center's Hispaniola Hazards Outlook For USAID / FEWS-NET 29 February – 6 March 2024

Wetter-than-average conditions expected in eastern Hispaniola during the next week

During the past week, little to light rainfall was received along the northeastern and southern coasts in the Dominican Republic, while dry conditions were observed elsewhere. Over the past 30 days, Hispaniola experienced wetter-than-average conditions, with central Haiti and bordering western Dominican Republic receiving between 50-100 mm in rainfall surpluses. Near-average conditions were observed elsewhere. Consequently, vegetation conditions were near-average to above-average over most places in Hispaniola, except for parts of the L'Artibonite, Centre, and Ouest Departments in Haiti and localized areas in western, north-central, southern, and eastern Dominican Republic, where conditions were below-average, according to recent agrometeorological indicators.

During the next week, moderate and above-average rainfall is forecast in northeastern Dominican Republic, whereas little to light and near-average rainfall is expected in Haiti. The forecast rainfall amounts should, in general, aid ongoing cropping activities over many local areas in Hispaniola.

Note: The Hazards outlook map is based on current weather/climate information, short and medium-range weather forecasts (up to 1 week), sub-seasonal forecasts up to 4 weeks, and assesses the potential impact of extreme events on crop and pasture conditions. Shaded polygons are added in areas where anomalous conditions have been observed and predicted to continue during the outlook period. The boundaries of these polygons are only approximate at the spatial scale of the map. This product takes into account long-range seasonal climate forecasts but does not reflect current or projected food security conditions. FEWS NET is a USAID-funded activity whose purpose is to provide objective information about food security conditions. Its views are not necessarily reflective of those of USAID or the U.S. Government. The FEWS NET weather hazards outlook process and products include participation by FEWS NET field and home offices, NOAA-CPC, USGS, USDA, NASA, and a number of other national and regional organizations in the countries concerned.

Questions or comments about the hazards outlooks may be directed to Dr. Wassila Thiaw, Head, International Desks/NOAA, wassila.thiaw@noaa.gov. Questions about the USAID FEWS NET activity may be directed to Dr. James Verdin, Program Manager, FEWS NET/USAID, jverdin@usaid.gov
