

1. Rainfall, Heat Index and Dust Concentration Forecasts, (Issued on March 29, 2018)

1.1. Daily Rainfall and Maximum Heat Index Forecasts (valid: Mar 30, – Apr 03, 2018)

The forecasts are expressed in terms of high probability of precipitation (POP) and high probability of maximum heat index, based on the NCEP/GFS and the NCEP Global Ensemble Forecasts System (GEFS) and expert assessment.

**Five Days Rainfall Forecast Summary
30 Mar - 03 Apr, 2018.**

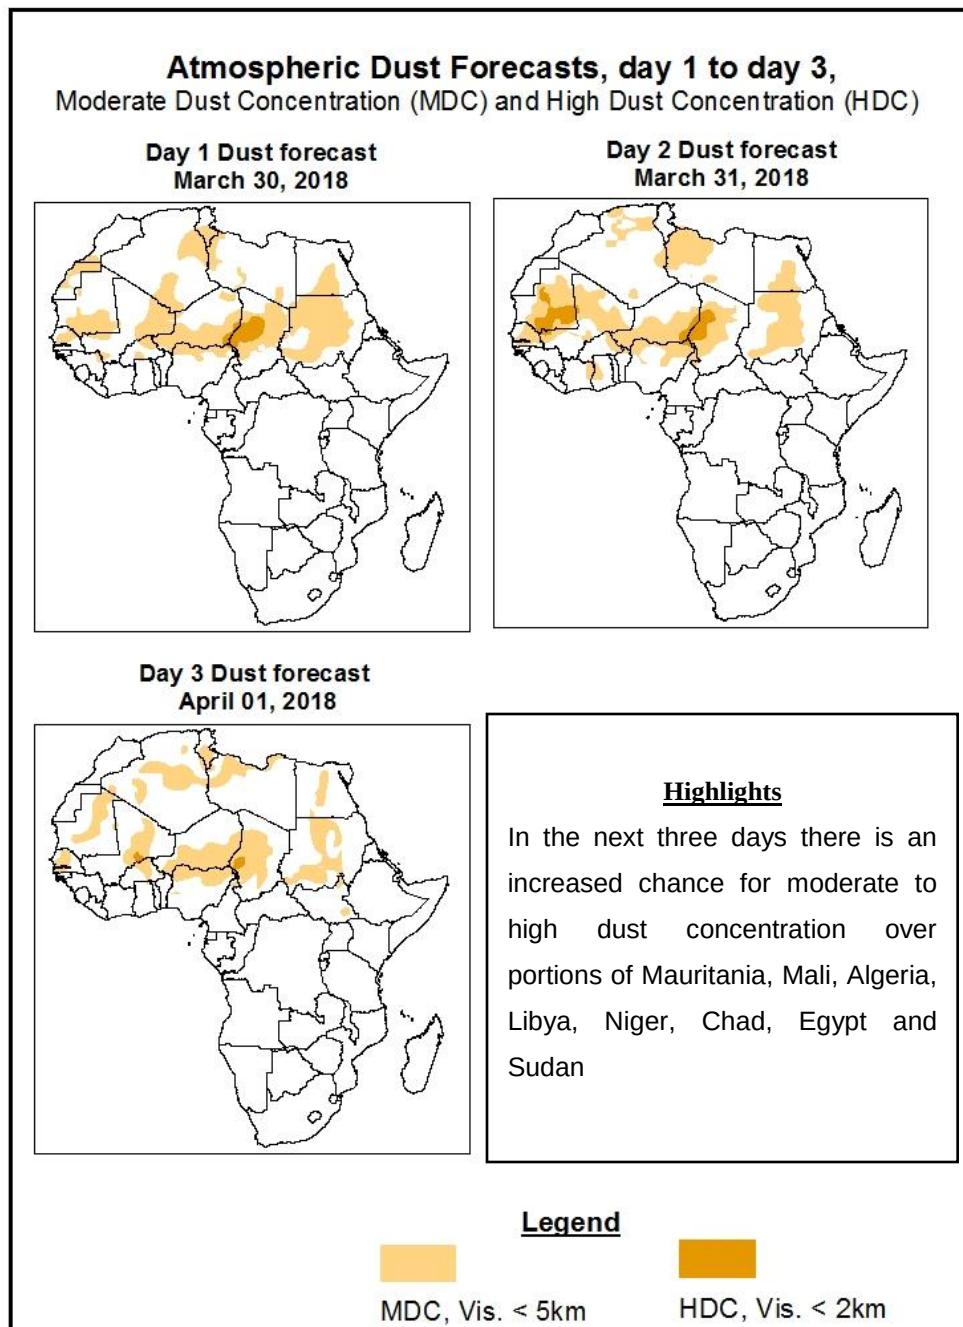

Highlights

In the next five days, lower-level convergence across Zambia and Tanzania, and lower-level wind convergence near Madagascar, and local wind convergence across parts of southern Tanzania are expected to enhance rainfall in their respective regions. As a result, there is an increased chance for two or more days of moderate to heavy rainfall over portions of Sierra Leone, Cote d’Ivoire, Cameroon, Gabon, Congo, DRC, CAR, Angola, Namibia, Zambia, Zimbabwe, Burundi, Rwanda, Lesotho, Swaziland, South Africa, Mozambique, Malawi, Tanzania, Ethiopia, South Sudan and Madagascar.

1.2. Atmospheric Dust Concentration Forecasts (valid: Mar 30, – Apr 01, 2018)

The forecasts are expressed in terms of high probability of dust concentration, based on the Navy Aerosol Analysis and Prediction System, NCEP/GFS lower-level wind forecasts and expert assessment.

1.3. Model Discussion, Valid: Mar 30 – Apr 03, 2018

The Azores High Pressure system over the North Atlantic Ocean is expected to weaken during the forecast period. The central pressure decreases from about 1025 hPa to 1016 hPa during the forecast period.

The St. Helena High Pressure system over the Southeast Atlantic Ocean is expected to weaken during the forecast period. The central pressure values ranges from about 1025 hPa to 1019 hPa during the forecast period.

The Mascarene High Pressure system over the Southwest Indian Ocean is expected to intensify during the forecast period. The central pressure values ranges from about 1020 hPa to 1033 hPa during the forecast period.

At 925hPa, dry strong northeasterly to easterly wind is expected to prevail across northern Africa and portions of the Sahel region.

At 850hPa, a broad area of wind convergence is expected to remain active across the northern portions of Zambia during the forecast period. A strong westerly flow with its associated lower-level convergence is expected to prevail across the northern portions of the Mozambique Channel and northern Madagascar.

In the next five days, lower-level convergence across Zambia and Tanzania, and lower-level wind convergence near Madagascar, and local wind convergence across parts of southern Tanzania are expected to enhance rainfall in their respective regions. As a result, there is an increased chance for two or more days of moderate to heavy rainfall over portions of Sierra Leone, Cote d'ivoire, Cameroon, Gabon, Congo, DRC, CAR, Angola, Namibia, Zambia, Zimbabwe, Burundi, Rwanda, Lesotho, Swaziland, South Africa, Mozambique, Malawi, Tanzania, Ethiopia, South Sudan and Madagascar.

2.0. Previous and Current Day Weather over Africa

2.1. Weather assessment for the previous day (March 28, 2018)

Moderate to locally heavy rainfall was observed over parts of Angola, DRC, Rwanda, Burundi, Mozambique, Zimbabwe, South Africa, Namibia, Malawi, South Sudan, Kenya, Uganda and Tanzania.

2.2. Weather assessment for the current day (March 29, 2018)

Intense convective clouds are observed over across the northern parts of Southern Africa. Intense clouds.
