

Climate Prediction Center's Afghanistan Hazards Outlook For USAID / FEWS-NET June 29 – July 5, 2011

Temperatures:

During early to mid-June, anomalous heat affected Afghanistan as temperatures average above normal. Central and southern Afghanistan experienced the largest positive temperatures anomalies (8 degrees C or more). The warmer than normal temperatures eliminated snow cover expect for the highest elevations in northeast Afghanistan. The elimination of snow coverage across the central highlands was close to the normal time. Temperatures are forecast to remain above normal during the next week. Maximum temperatures are expected to range from 40 to 45 degrees C in southwest Afghanistan.

Precipitation

Mostly dry weather prevailed during the past week which is typical for June. Seasonal dryness is expected to continue during the upcoming week. Heavy rainfall associated with the Indian Monsoon may affect north-central Pakistan.

Note: The Hazards outlook map is based on current weather/climate information, short and medium range weather forecasts (up to 1 week), and assesses their potential impact on crop and pasture conditions. Shaded polygons are added in areas where anomalous conditions have been observed. The boundaries of these polygons are only approximate at this continental scale. This product does not reflect long range seasonal climate forecasts or indicate current or projected food security conditions.

FEWS NET is a USAID-funded activity whose purpose is to provide objective information about food security conditions. Its views are not necessarily reflective of those of USAID or the U.S. Government. The FEWS NET weather hazards assessment process and products include participation by FEWS NET field and home offices, NOAA-CPC, USGS, USDA, NASA, and a number of other national and regional organizations in the countries concerned. Questions or comments about this product may be directed to Wassila.Thiaw@noaa.gov or 1-301-763-8000 x7566. Questions about the USAID FEWSNET activity may be directed to Gary Eilerts, USAID Program Manager for FEWSNET, 1-202-219-0500 or geilerts@usaid.gov.
