

## Climate Prediction Center's Central Asia Hazards Outlook For USAID / FEWS-NET August 01- 07, 2019

### Temperatures:

Last week, the mean surface temperature generally ranged between normal to above –normal throughout Central Asia except over central Uzbekistan and Turkmenistan exceeding 45 degree C. Towards the beginning of august. Maximum daytime temperatures are expected to be cooler compared to the previous week, with more near-normal temperatures and possible above-normal temperature (8-12 degrees C) over Tajikistan and the northern part of Afghanistan.

### Precipitation

During the past week, flash flooding and landslides have been reported in several cities in the northern part of Pakistan. Across northern Kazakhstan, well distributed precipitation amounts ranging between 5-50mm were registered across the eastern provinces helping to bring some moisture relief due to the lack of continuous rain these past weeks. Analysis of moisture/rainfall anomalies since mid-June suggests the weaker pattern of abnormal dryness across northern Kazakhstan is still present. As a response to the climate, a below-average moisture conditions and unfavorable vegetation health has been noted across the northern Kazakhstan province. During the next week, model precipitation forecasts indicate almost no rain forecast over Central Asia except in the north-eastern Kazakhstan, Pakistan toward the north-eastern border of Afghanistan. Towards the northern Pakistan, locally heavy weekly rainfall amounts (>50mm) are possible, which would likely to exacerbate flooding conditions in the region.

**Note: The Hazards outlook map is based on current weather/climate information, short and medium range weather forecasts (up to 1 week), and assesses their potential impact on crop and pasture conditions. Shaded polygons are added in areas where anomalous conditions have been observed. The boundaries of these polygons are only approximate at this continental scale. This product does not reflect long range seasonal climate forecasts or indicate current or projected food security conditions.**

FEWS NET is a USAID-funded activity whose purpose is to provide objective information about food security conditions. Its views are not necessarily reflective of those of USAID or the U.S. Government. The FEWS NET weather hazards outlook process and products include participation by FEWS NET field and home offices, NOAA-CPC, USGS, USDA, NASA, and a number of other national and regional organizations in the countries concerned. Questions or comments about this product may be directed to Wassila.Thiaw@noaa.gov or 1-301-683-3424. Questions about the USAID FEWSNET activity may be directed to Gary Eilerts, USAID Program Manager for FEWSNET, 1-202-254-0204 or geilerts@usaid.gov.
