

The USAID FEWS-NET

Haiti Weather Hazards and Benefits Assessment

For **November 23 – 29, 2006**

A near normal season on Hispaniola is coming to an end with above normal rainfall. After some crop damage during the last days of October, a strong front currently moving through the Caribbean will likely bring heavy rainfall to what are usually the more drought prone areas of the island. Rainfall could be heavy enough to cause minor flooding along both peninsulas during the early part of the period.

FEWS NET is a USAID-funded activity whose purpose is to provide objective information about food security conditions. Its views are not necessarily reflective of those of USAID. The FEWS NET weather hazards assessment process and products include participation by FEWS NET field and home offices, NOAA-CPC, USGS, NASA, and a number of other national and regional organizations in the countries concerned. Questions or comments about this product may be directed to Chet.Schmitt@noaa.gov or 1-301-763-8000 x7519
