Haiti Weather Hazards and Benefits Assessment

For

May 10 – May 16, 2007

Rainfall during this last period was light throughout the region but has proven beneficial to the improvement of soil conditions in central Hispaniola. Elsewhere soil conditions are not faring as well. However, ground reports from Haiti state that the young beans and maize crops are doing fine except in the northwest where this is not the main season. For Haiti, there is no concern in the short term.
