### Haiti Weather Hazards and Benefits Assessment

For

October 25 – October 31, 2007

Conditions in Haiti were calmer and drier this past week, enabling clean-up efforts in the central region of the country. From the northern department of Ouest to the north of the country rainfall totals ranged from 25 to 75 mm. Elsewhere totals ranged from 0-10 mm. This is evidence of seasonal rains winding down. Next period Haiti will be mostly cloudy with occasional rains. Later in the period heavier rainfall totals will be in the southern peninsula of Haiti and eastern Dominican Republic.
