

Haiti Weather Hazards and Benefits Assessment

For

July 31 – August 6, 2008

July 27th brought excessive rains near the city of Hinche in central Haiti. This event is likely to have caused localized damage. Elsewhere, moderate rains continued in the northern half of Hispaniola while light rainfall totals remained in the south. The recent trend in lighter rainfall activity has been beneficial to harvest and sowing activities as the country shifts into its second cropping season. During the July 31 – August 6 period, moderate rains are expected across the
