

Haiti Weather Hazards and Benefits Assessment

For

April 30 – May 6, 2009

NO HAZARDS

During the past observation period much of the island was characterized by moderate rains ranging from 10 – 75 mm. Elsewhere, light rains were observed totaling less than 10 mm. Haiti is now entering into the growth phase of all of its active crops and due to the favorable rainfall totals during the month of April; much of the island is at or just near average.
