

CPC Africa Desk InterTropical (ITF) Front Analysis

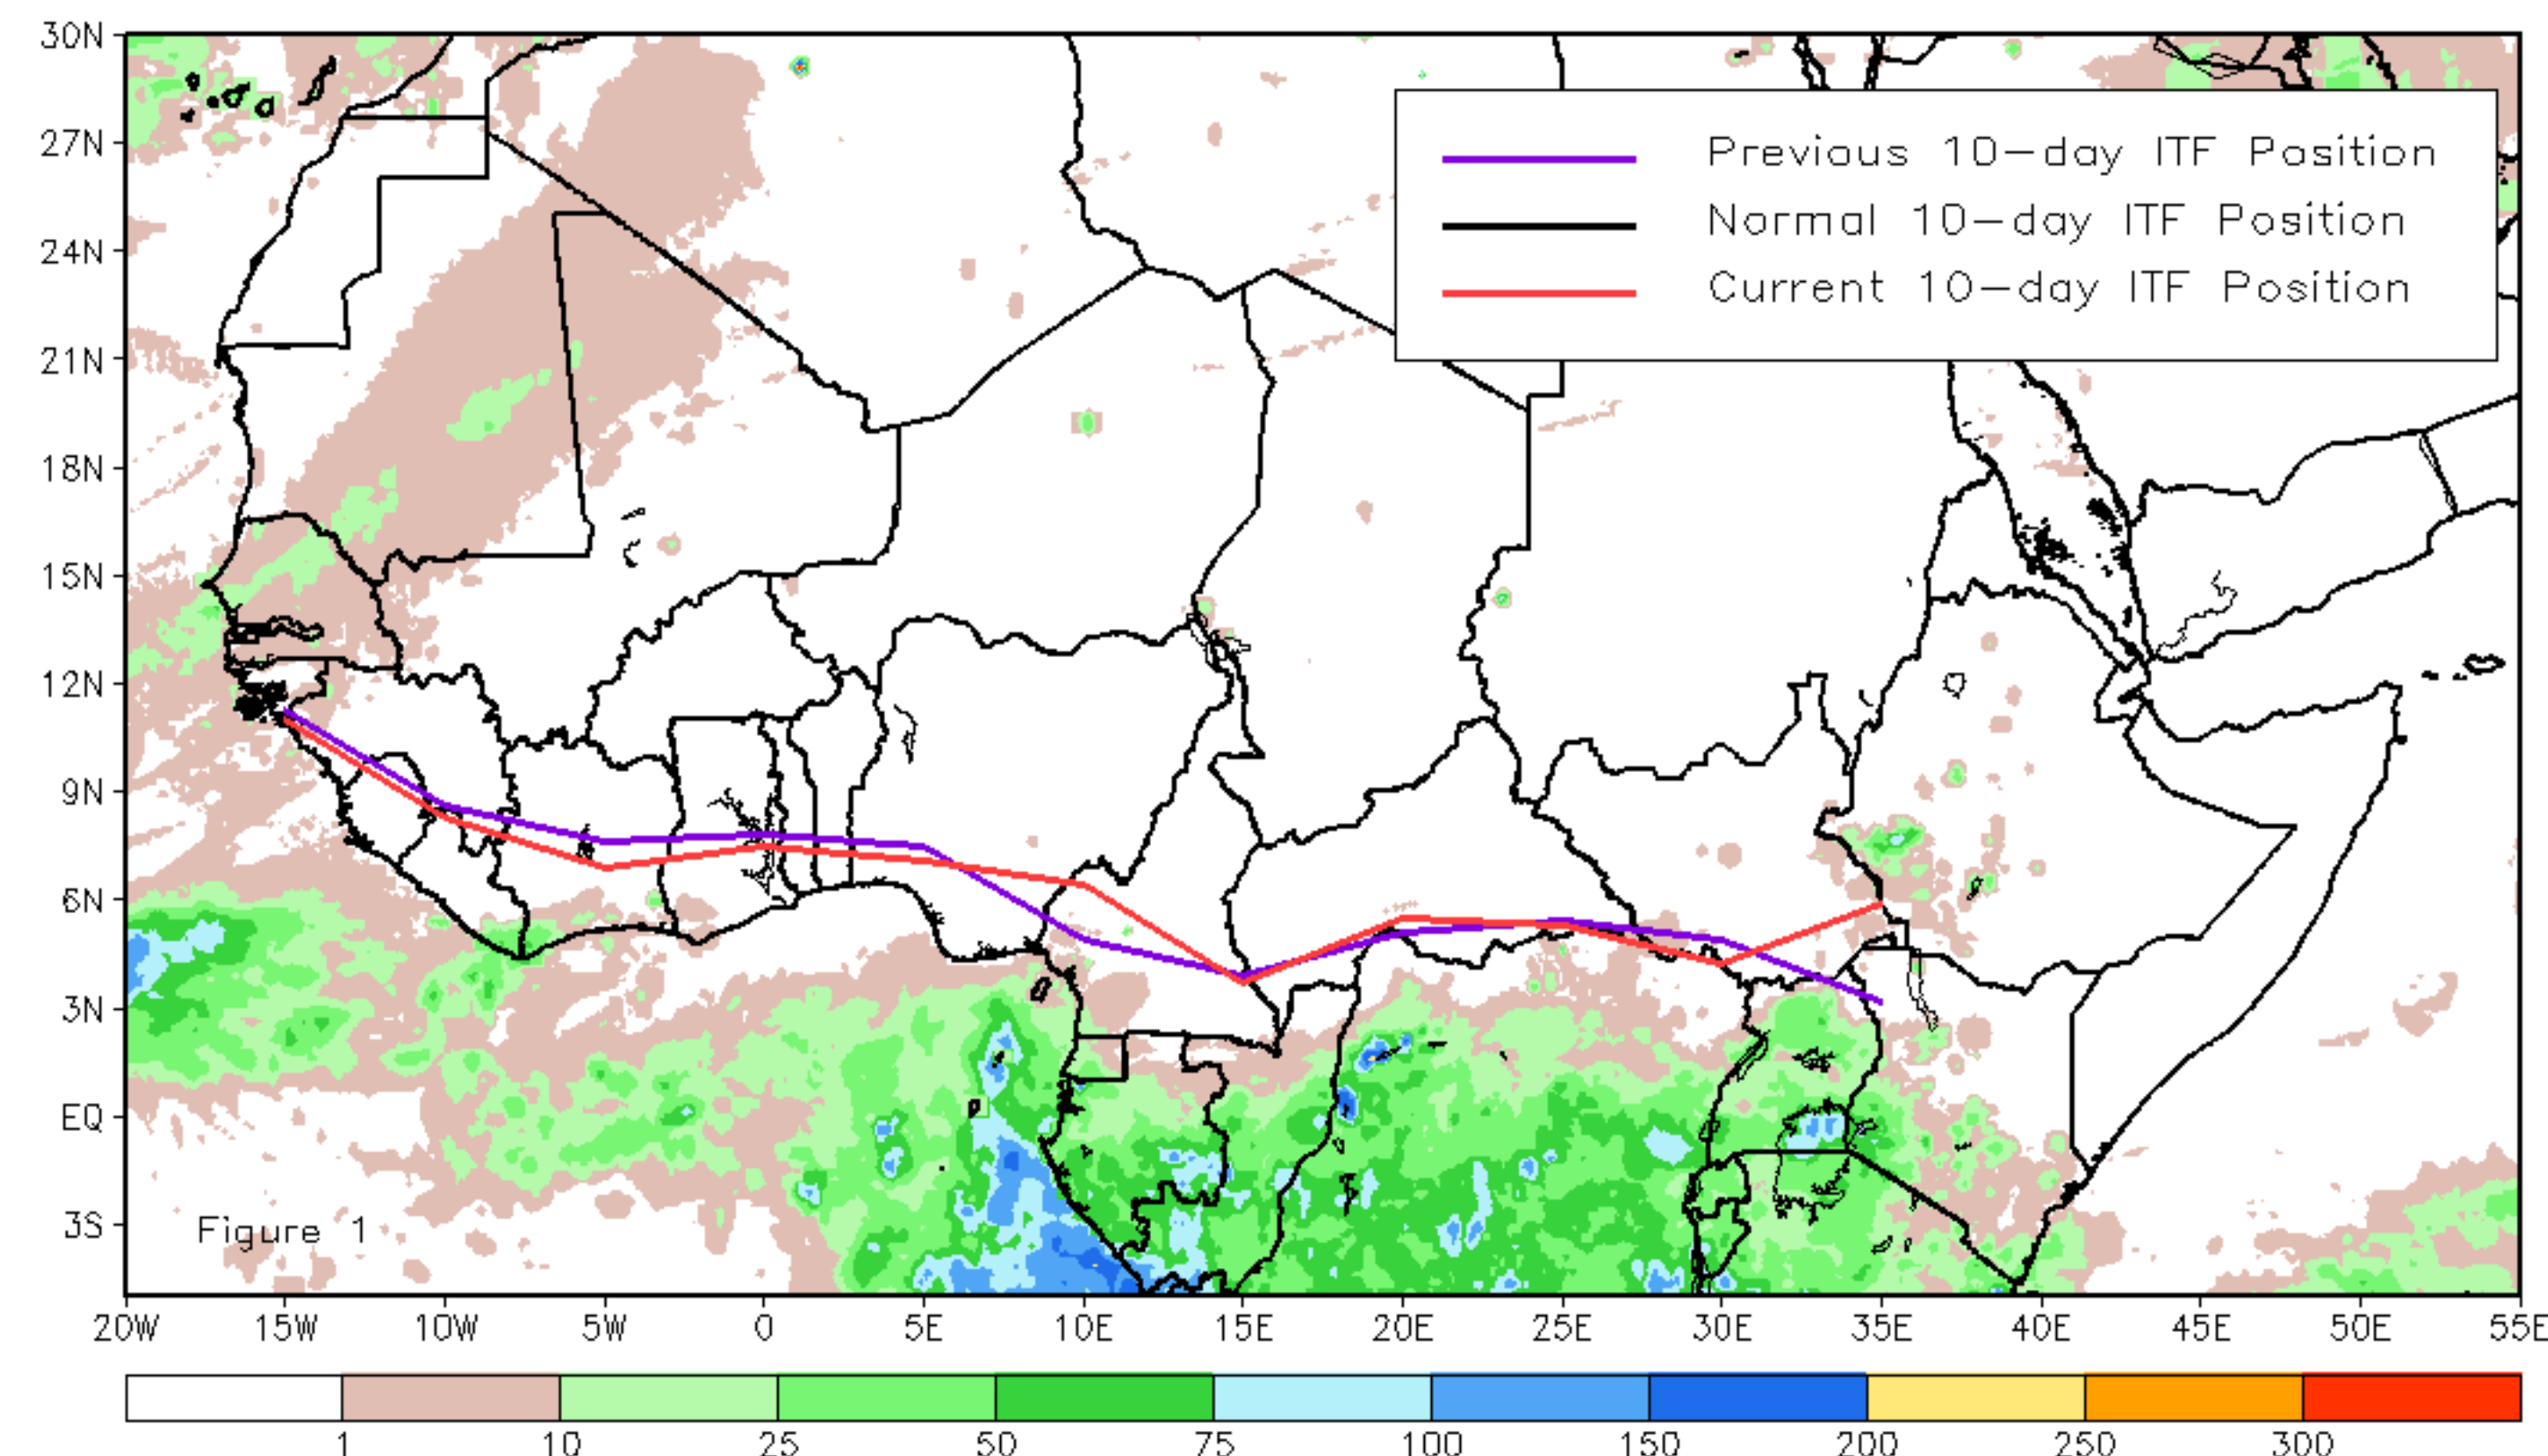

December 2024, Dekad 3

Discussion:

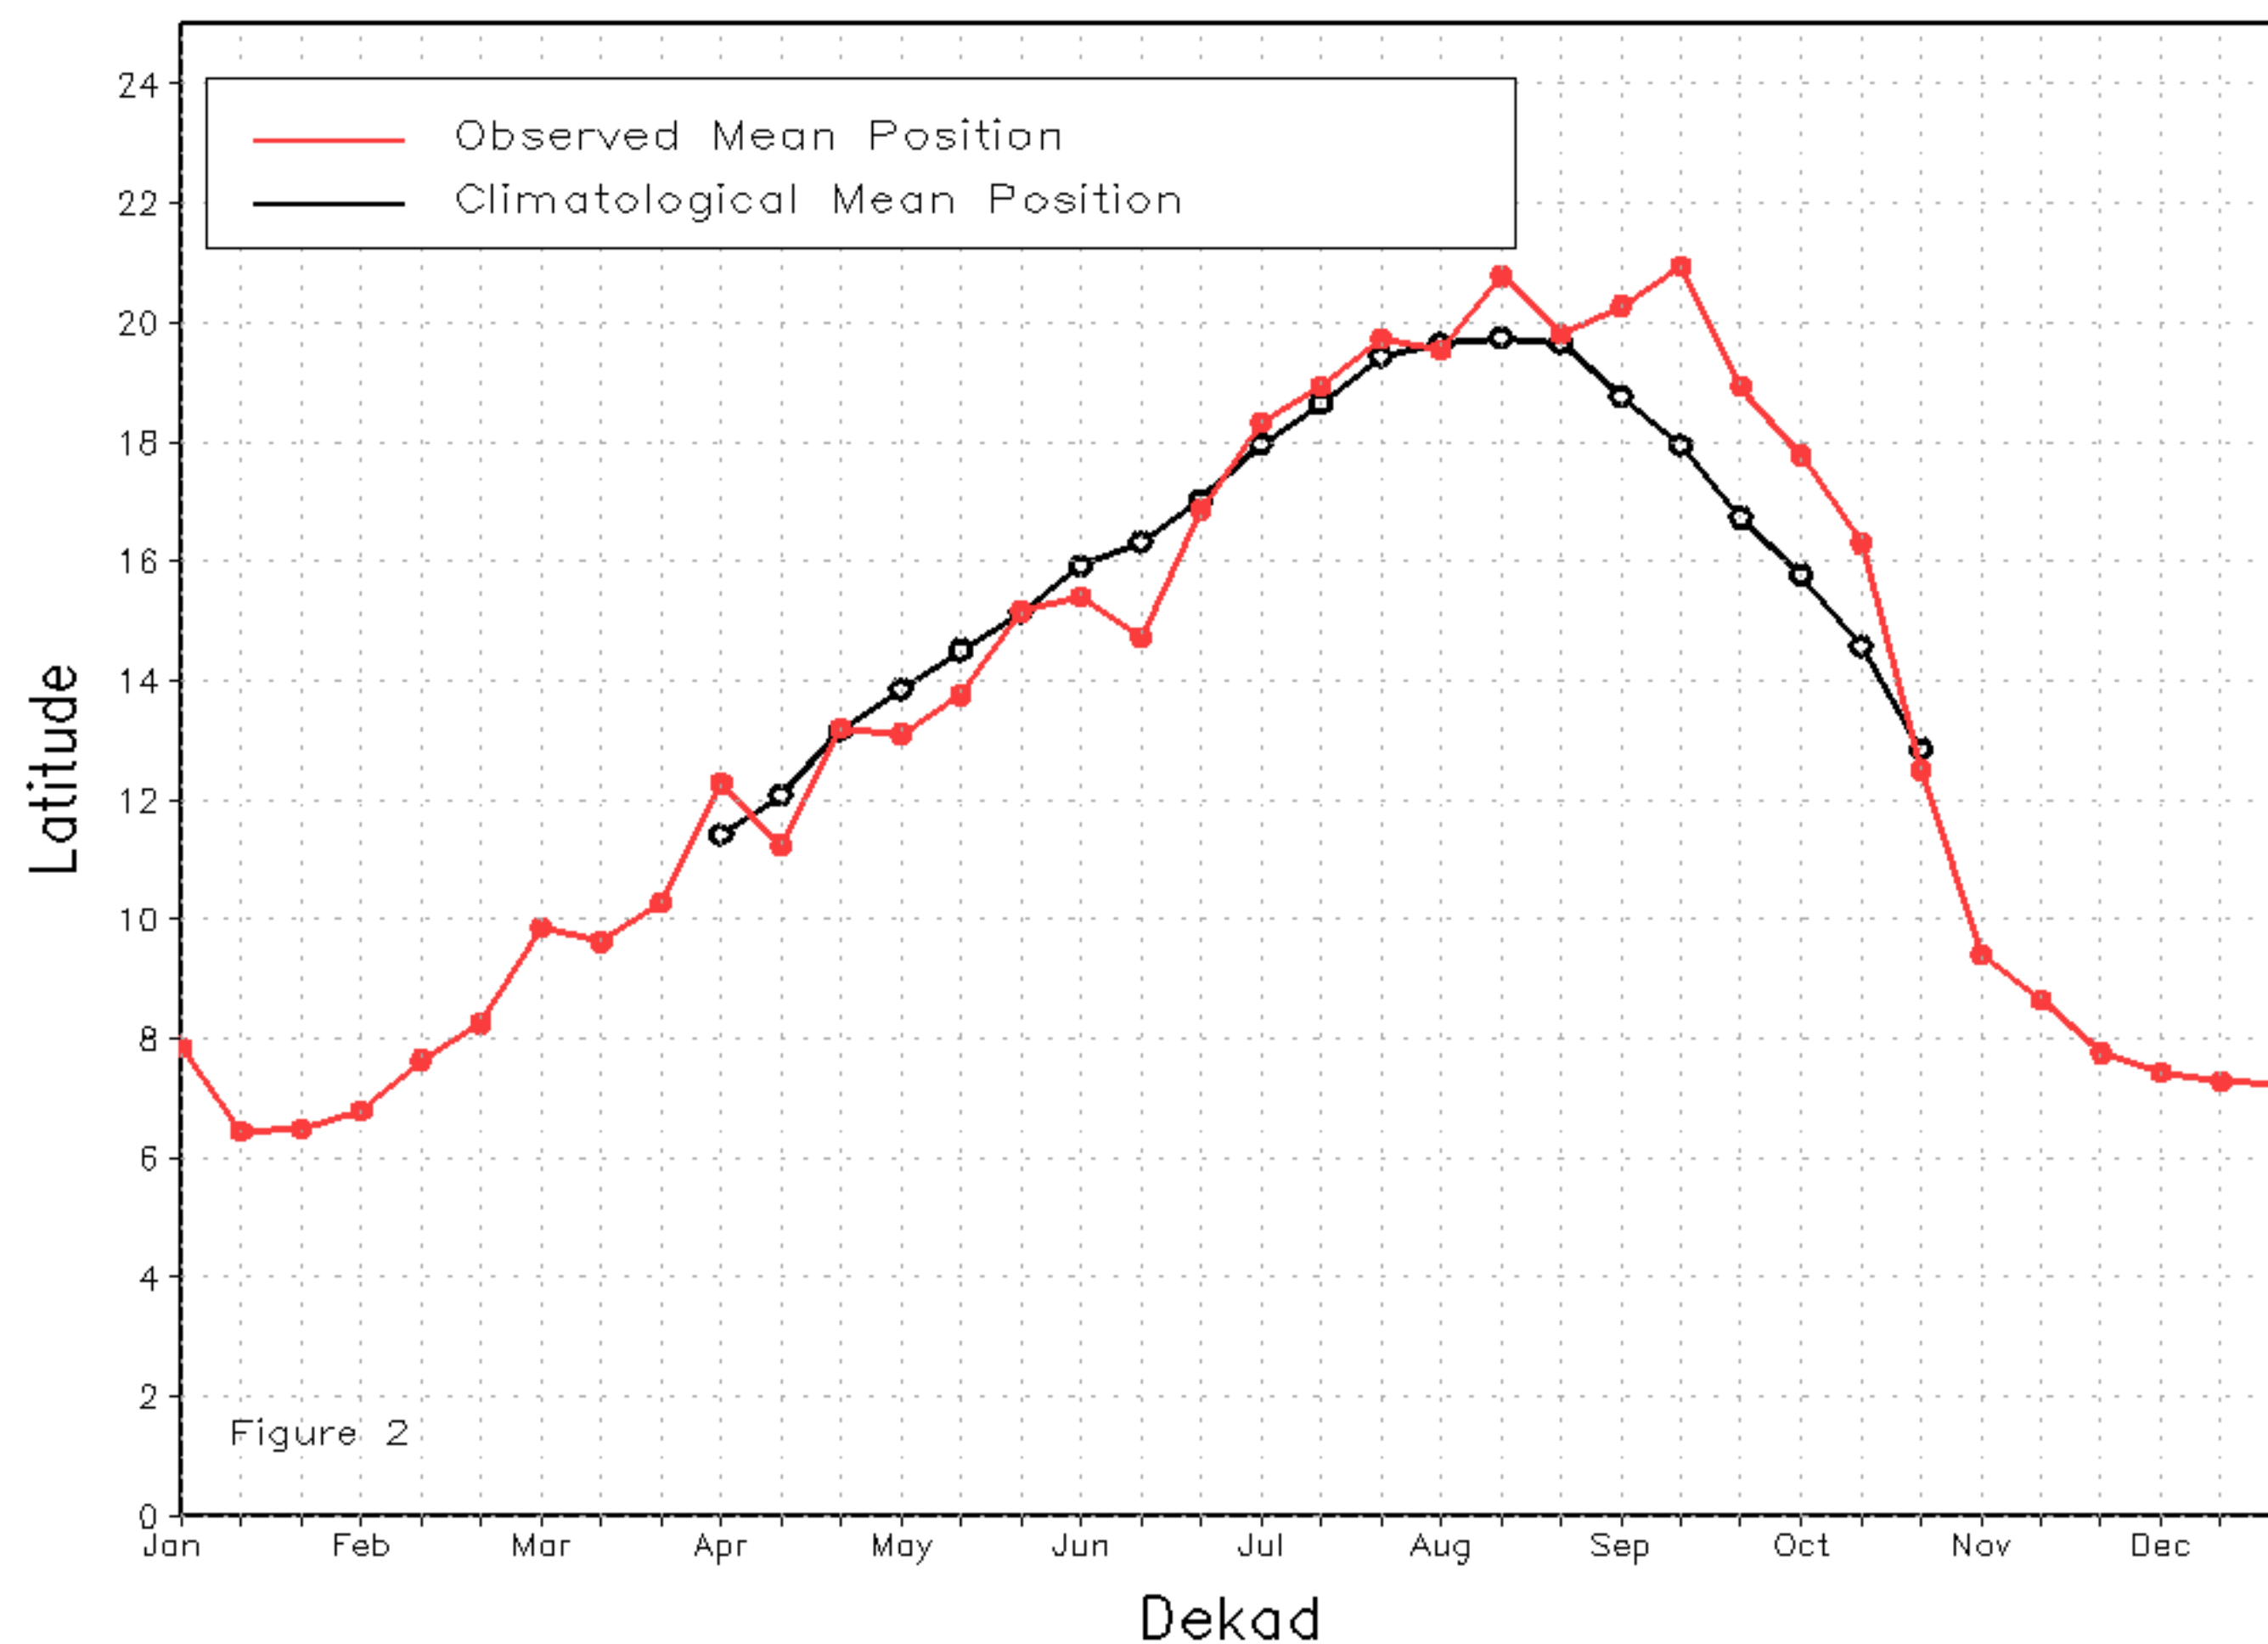

From December 21-31, the Inter-Tropical Front (ITF) moved southward in the western part and northward in the eastern part compared to its previous position. Specifically, the current ITF was located at approximately 7.2N in the western portion, which is south of its previous position at 7.3N. In the eastern part, the current location of the ITF is around 5.2N compared to 4.7N in the previous position. Figure 1 displays the current position of the ITF during the 3rd dekad of December and its previous position during the 2nd dekad of December. Figures 2 and 3 are time series, illustrating the latitudinal positions for the western and eastern portions of the ITF, respectively, and their seasonal evolutions since the beginning of April 2024.

Current vs. Normal Dekadal ITF Position
and RFE Accumulated Precipitation (mm)
