

CPC Africa Desk InterTropical (ITF) Front Analysis September 2023, Dekad 3

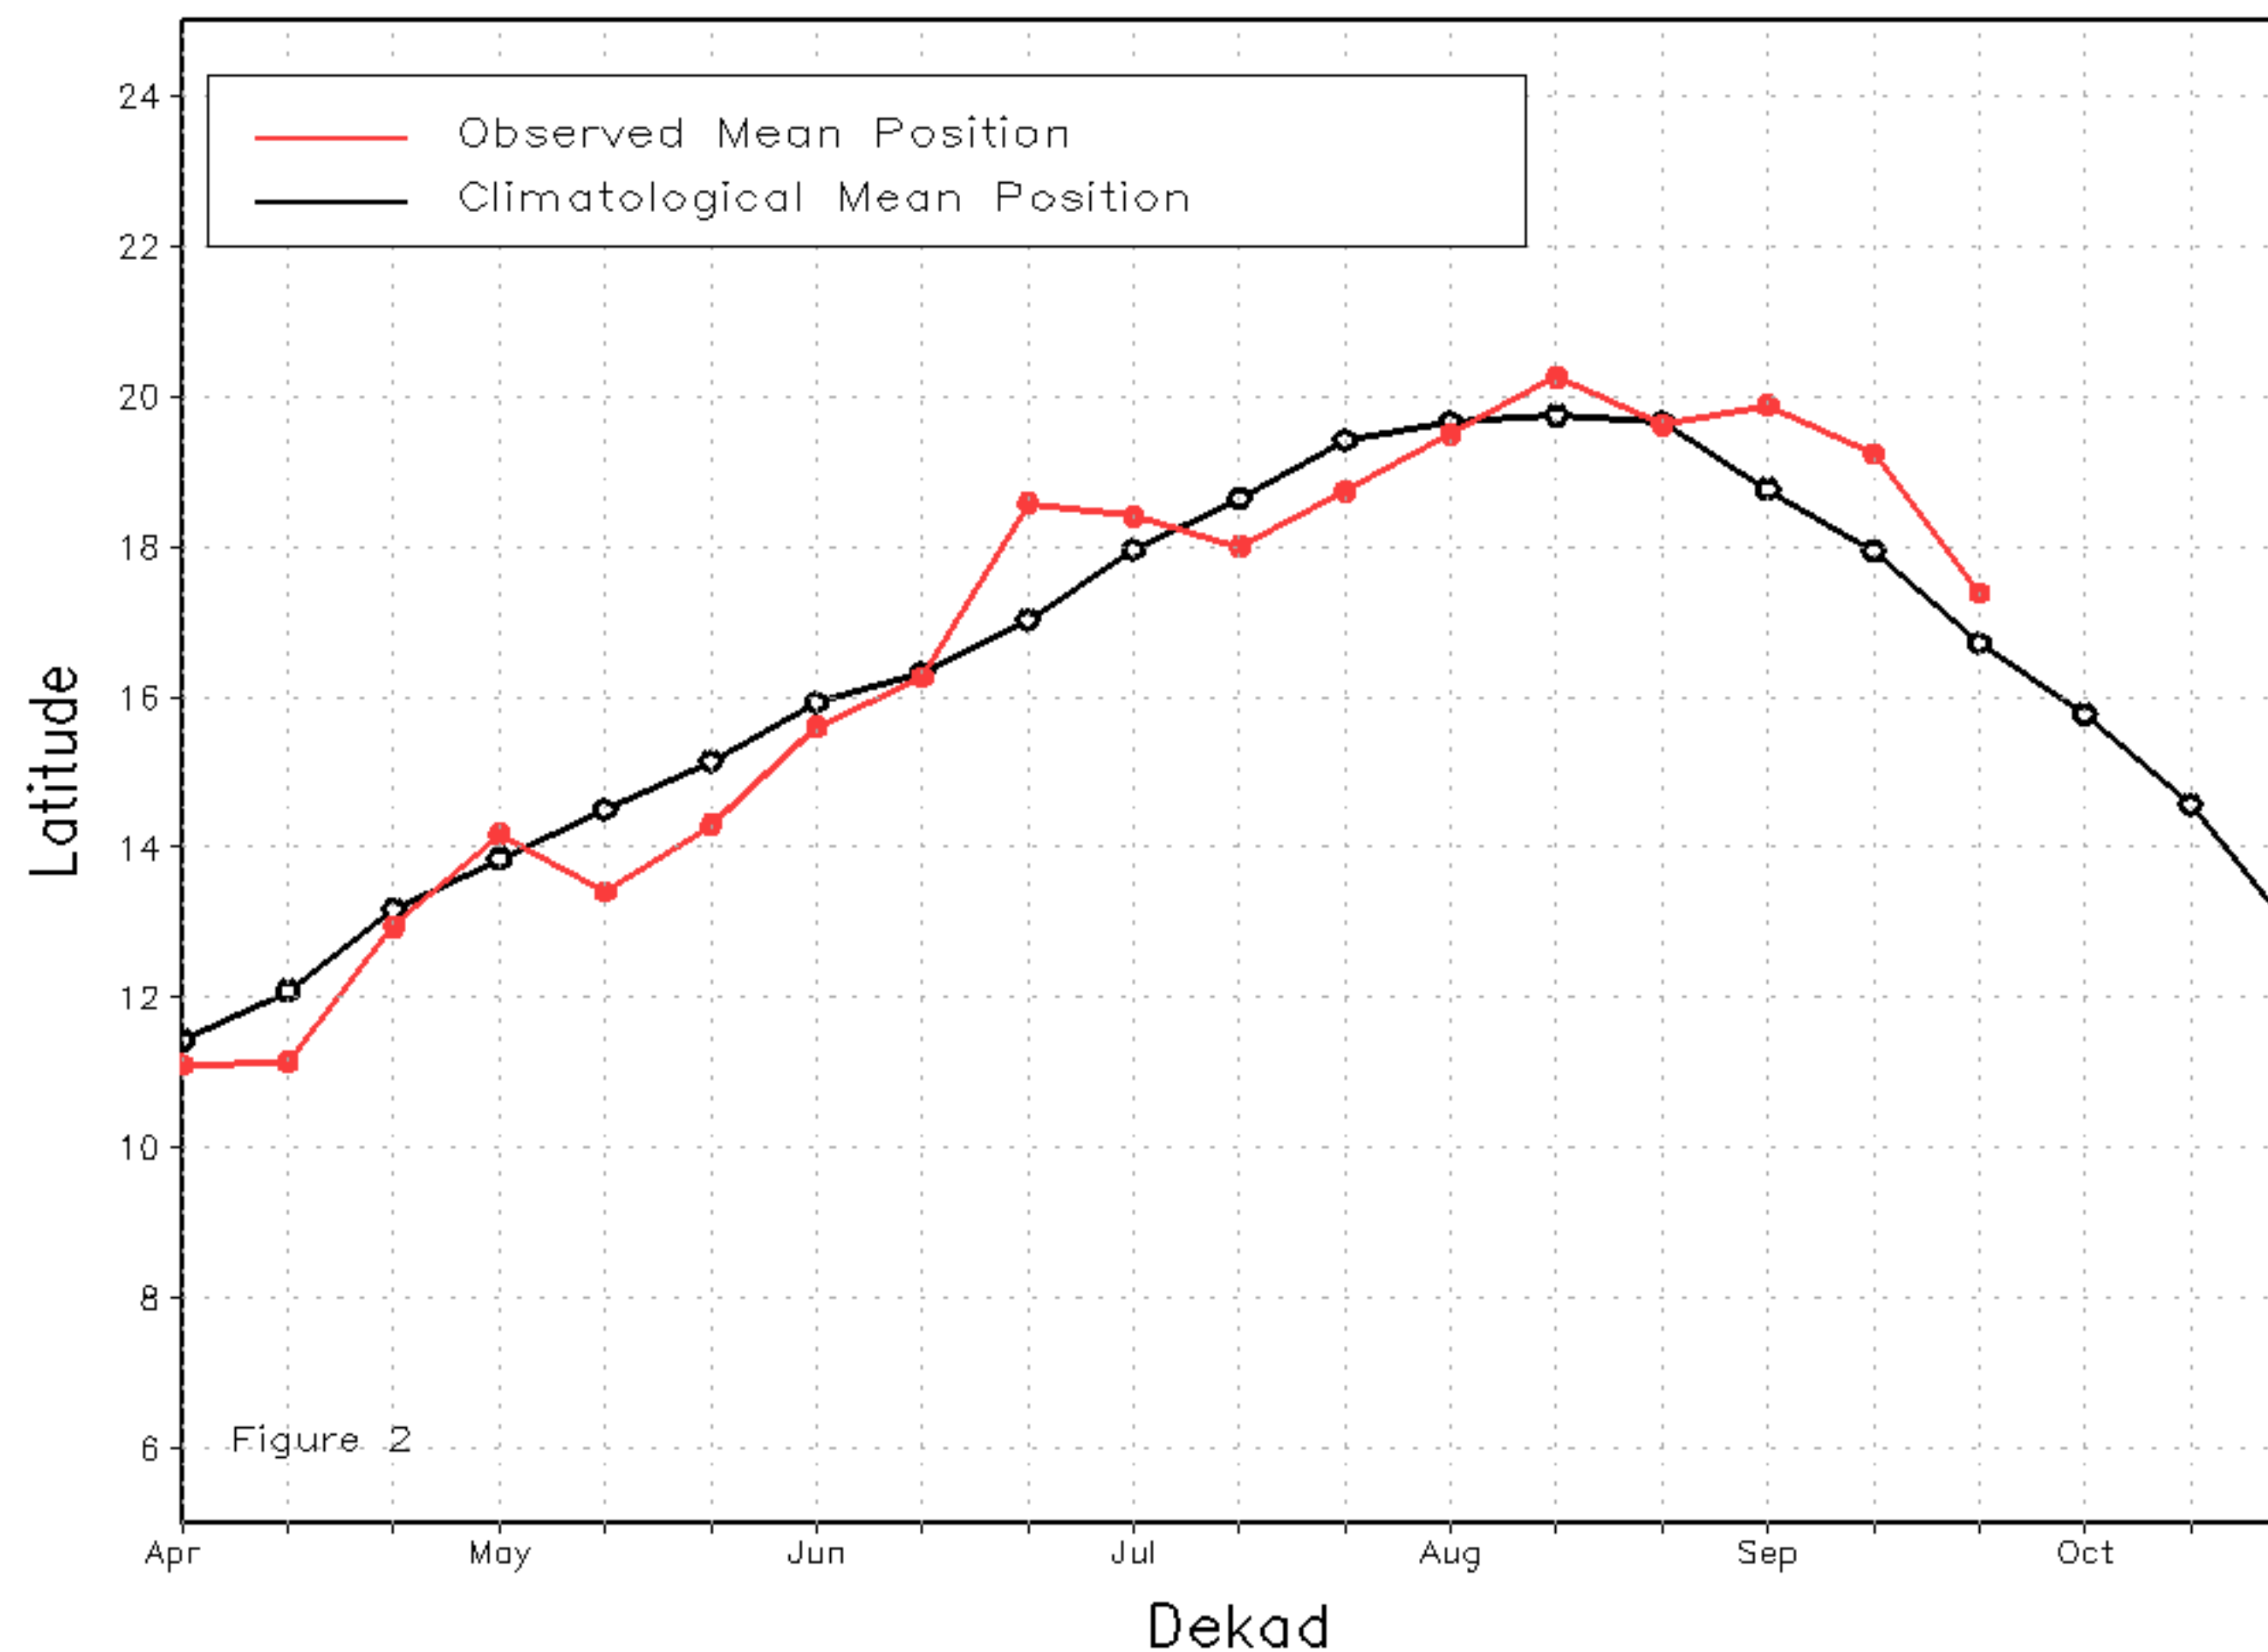

Discussion:

From 21-30 September, the ITF propagated south relative to the previous position along its entire length. The western (10W-10E) portion of the ITF was located approximately at 17.4N, which was above the climatological position by 0.7 degrees. Also, at the eastern (20E-35E) portion, the ITF was approximated at 15.6N, which was above the long-term average position by 1.2 degrees. Figure 1 displays the current position of the ITF relative to the climatological position during the 3rd dekad of September and its previous position during the 2nd dekad of September. Figures 2 and 3 are time series, illustrating the latitudinal positions for the western and eastern portions of the ITF, respectively, and their seasonal evolutions since the beginning of April 2023.

Current vs. Normal Dekadal ITF Position
and RFE Accumulated Precipitation (mm)
September 2023, Dekad 3
